

Fetal Doppler Hand Held

DK-YM-2T8

- * Switch between two measurement modes of digital curve at will.
- *OLED display clear reading.
- *integrated design streamline appearance.
- * It has signal strength display function to facilitate users to find measuring points.
- *Autocorrelation algorithm 12 weeks can be measured fetal heart rate.
- *Adopt the same DSP technology and fetal heart rate algorithm as the fetal monitor to ensure that the monitored fetal heart rate is accurate and reliable.
- * Pulse ultrasonic doppler working mode single chip high sensitivity probe 2MHz working frequency ultrasonic dose is far lower than the national safety standard so it is safer to monitor the fetus.
- * Two no. 5 (AA) batteries can work continuously and shut down automatically without signal for 1 minute.

Fine quality built-in speakers with clear sound and the volume is adjustable within 1-7 level.

PROMISE™ Fetal Doppler
2 Mhz Probe - The Most Scientific And Healthy Manner.
Best When Used After The 12th Week Of Pregnancy
- Make You Be Closer With Your Coming Baby.

Powered by two AA batteries for continuous work.
Automatically turn off if there is no signal within 1 minute.
